WEATHER SYNOPSIS BY REGION

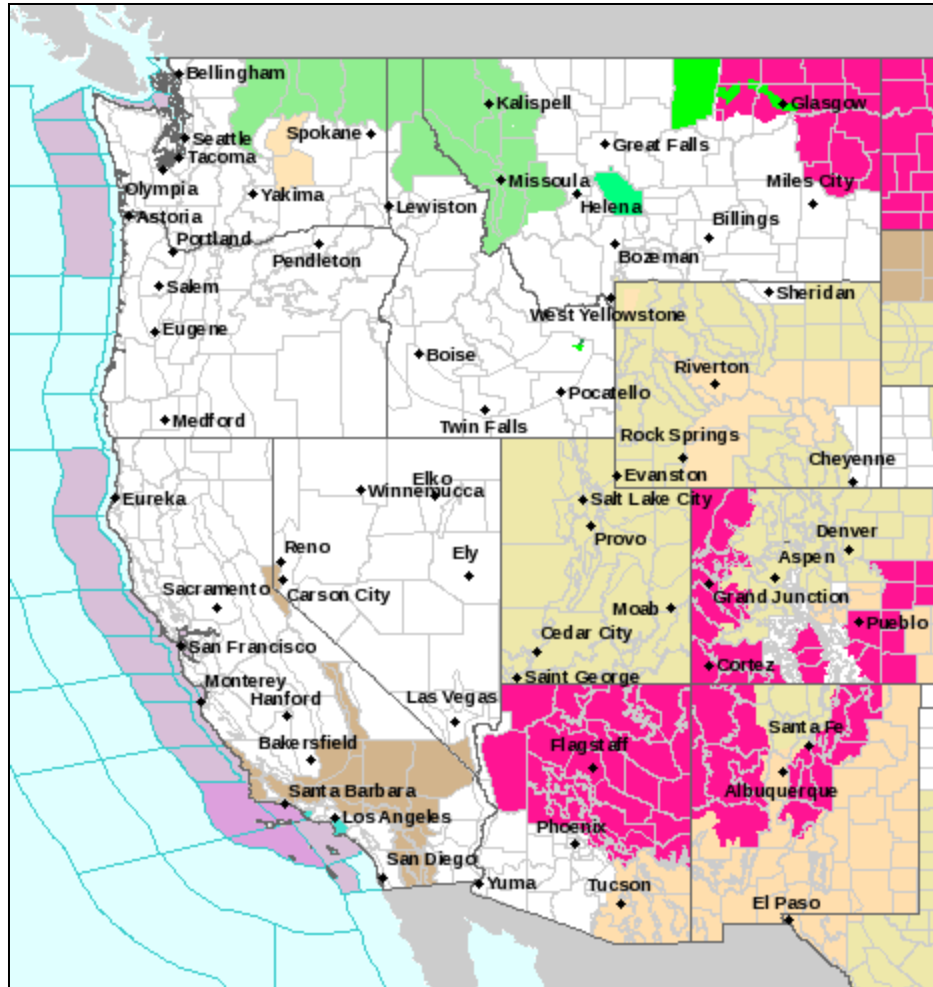

NORTHERN CALIFORNIA

A low pressure system moving across the Pacific Northwest is expected to bring cooler conditions to Northern California with isolated showers and thunderstorms, mainly over the mountains and northern valley. Cooler temperatures and increased cloud cover also a byproduct of the system. The low will continue to move inland through the rest of the weekend with additional chances for showers and isolated thunderstorms across the mountains and northern valley. Activity will be hit or miss with light accumulations. Snow levels will generally be above 5500-6000 feet with a few inches possible in any showers that do pop up. Rest of the area will remain dry with similar temperatures for Sunday. By next week, it is expected to be drier and warmer except for scattered mountain showers and thunderstorms through the middle of next week. Expect highs to be 5-10 degrees below normal through next Tuesday with highs in the 50s in the mountains, 60s along the coast to the mid-70s in the southern San Joaquin Valley and the low desert

SOUTHERN CALIFORNIA

Gusty northwest winds will prevail for the Central Coast, Santa Barbara County south coast, and the mountains and deserts through Sunday night. Otherwise, generally fair weather with slightly below normal temperatures can be expected through Monday. Low pressure will bring a chance of showers, mountain snow showers, and a slight chance of thunderstorms to the area Tuesday into Tuesday night. Dry and increasingly warm conditions can then be expected later Wednesday through Saturday.
